

BETTING OFFICES

Sports are exciting, and betting on the outcome even more so. What better place to get into the mood than betting offices?

Using the flexible AOPEN and Polywall solution, you can use your current displays or go all new. Combine multiple displays to show one race or give each race their own display.

With a broad choice of sources, you don't need to change subscriptions, even when you use a set-up with an HDMI output. Changing the settings is easy, and automatic.

THE PROCESS

The Polywall software allows you to easily integrate almost any digital data or streaming video source.

Simply choose the content to display, plug it into a layout of your choosing, confirm the display scenario and enjoy the game.

THE SCENARIOS

With the AOPEN DEV7610-X6 and the Polywall software you can create pre-sets for every single screen or the video wall as a whole.

Schedule the content, or just a part of the content and don't bat another eye.

Use multiple viewing source types to create the video wall best suited for your betting office.

Contact Polywall and AOPEN now for information at request@aopen.com or ir@polywall.net

THE DEVICE

The DEV7610-X6 is a powerful media player that runs 6 screens in 4K. It has two HDMI inputs to capture direct video signals from, for instance, digital data or a streaming video source.
